

Encyclopedia of the Eye

Four Volume Set

As the first comprehensive reference for the eye, its support structures, diseases, and treatments, *Encyclopedia of the Eye* is an important resource for all visual scientists, ophthalmologists, and optometrists, as well as researchers in immunology, infectious disease, cell biology, neurobiology and related disciplines. This four volume reference is unique in its coverage of information on all tissues important for vision, including the retina, cornea and lens. It also covers the physiological and pathophysiologic processes that affect all eye tissues.

Key Features

- includes many full-colour high quality figures and images throughout, to clearly illustrate the complex processes underlying function
- topics covered span the breadth of modern eye research
- each article is written by a leading expert in the field
