

Evidence-based Management of Diabetes

ISBN: 978 1 903378 78 6

Hardback

~350pp

Pub date: December 2010

Retail price: GBP £50; USD \$99; EUR €75

Jiten Vora BA MB BChir MA MD FRCP Professor & Consultant Physician and Endocrinologist, Royal Liverpool University Hospital, Liverpool, UK, **John Buse MD PhD** Professor of Medicine; Director, Diabetes Care Center and Chief, Division of Endocrinology; Executive Associate Dean for Clinical Research; University of North Carolina School of Medicine, Chapel Hill, North Carolina, USA

The clinical management of patients with diabetes is rapidly evolving. *Evidence-based Management of Diabetes* provides a succinct summary of a range of topics, including areas where there is already well developed evidence for a particular treatment, but also those areas where the evidence is perhaps doubtful or there is some associated controversy or ambiguity. Where possible throughout the book treatment recommendations are given based on the available evidence and practice guidelines. The book also highlights the gaps in evidence where further research is needed. In the practice of diabetes care, there are many issues influencing practitioners currently. This book addresses many of the most pertinent issues concerning delivery of diabetes care such as:

- Is diabetes preventable in high-risk individuals?
- Once diabetes has developed what are the goals of treatment and how aggressive should treatment be whilst avoiding adverse effects?
- What is the role of treating glycaemia in reducing macrovascular disease?
- Who to screen, how to screen and who to treat for coronary artery disease?
- Who and how to treat hyperglycaemia in acute coronary syndromes?
- Has there been any progress in the management of gestational diabetes?
- Is there an evidence base for the treatment of Type 2 diabetes with oral hypoglycaemic agents?

The authors are internationally renowned experts in the field of diabetes care who successfully and succinctly present state-of-the-art reviews based on the medical evidence designed to help the clinician be as best informed as possible in the care of patients with diabetes. P.T.O.

Contents *(provisional at this stage)*

- Chapter 1** Insulin resistance
- Chapter 2** Goals of treatment
- Chapter 3** Prevention of diabetes in high-risk individuals
- Chapter 4** Early insulin initiation in type 2 diabetes
- Chapter 5** Treatment of blood pressure
- Chapter 6** Glucose control and macrovascular disease/morbidity
- Chapter 7** Dual blockade of RAS in diabetes with ACE inhibitors and ARBs
- Chapter 8** Anaemia and renal disease
- Chapter 9** Treatment of foot conditions
- Chapter 10** Coronary artery disease: who to screen, how to screen, when to treat
- Chapter 11** Hyperglycaemia in patients with acute coronary syndromes
- Chapter 12** Gestational diabetes
- Chapter 13** Patient education
- Chapter 14** Drugs and outcomes
- Chapter 15** The role of CGMS in the management of type 1 and 2 diabetes
- Chapter 16** Retinopathy treatment
- Chapter 17** Neuropathy
